STAFF DASHBOARDS

COMPLETE DEVELOPMENT PROMPT

Staff Operations • Finance Officer • Viewer • Attorney Portal • Medical Expert Portal • Claimant Portal

Internal Staff Operations System + External Portals — Production-Ready
Version 1.0 • June 2025

OVERVIEW — REMAINING DASHBOARDS

This prompt document covers every dashboard that is NOT the Admin Dashboard. It is the direct continuation of the Admin Dashboard Prompt. Always include Section 1 (Core Rules) from the Admin Dashboard Prompt at the top of every prompt you send to your AI code assistant — the same CSS, TypeScript, data, and security rules apply to every dashboard.

Dashboard	Role	Section	Access Level
Staff Operations Dashboard	staff	Section 1	Operational — most features, no finance/admin
Finance Officer Dashboard	finance	Section 2	Finance-focused — invoices, payments, ZAR
Viewer Dashboard	viewer	Section 3	Read-only — no actions, no mutations
Attorney Portal	attorney	Section 4	External — manage own matters, appointments
Medical Expert Portal	expert	Section 5	External — accept assignments, submit reports
Claimant Portal	claimant	Section 6	External — view own appointment, documents

SECTION 1 — STAFF OPERATIONS DASHBOARD

The Staff role is the primary operational role. Staff members handle the day-to-day running of appointments from scheduling through to report review. They do NOT access finance, system settings, staff management, or audit logs. Their dashboard is appointment-centric and action-heavy.

1.1 Staff Dashboard Home (StaffDashboardHome.tsx)

This is the landing page after a staff member logs in. Focused entirely on operational urgency — what needs attention TODAY.

KPI Row — 6 cards:

- My Appointments Today (appointments where this staff member is the assigned handler)
- Pending Approvals — count requiring action
- Experts Not Yet Confirmed — appointments where expert has not accepted
- Checklists Incomplete — appointments blocked by incomplete checklist
- Reports Awaiting Review — submitted by experts, not yet reviewed
- Assessments Overdue — appointment date passed, assessment not submitted

Today's Work Queue (Main Table):

This is the most important element on the staff dashboard. It is a live, prioritised list of all appointments requiring action today or overdue.

- Priority sort: OVERDUE first, then TODAY, then PENDING_APPROVAL, then REPORT_PENDING
- Columns: Reference, Claimant, Attorney, Expert, Date/Time, Type, Status, Checklist %, Action
- Action buttons per row adapt to status (e.g. if PENDING_APPROVAL → Approve / Reject)
- Row colour-coding: red = overdue/urgent, amber = today, green = on track
- Clicking any row → full Appointment Detail page

Quick Action Buttons:

- Log New Appointment — opens AppointmentCreateModal
- View Full Calendar — navigates to StaffCalendar.tsx
- Search Appointment — focuses global search bar

1.2 Staff — Appointment Management

Staff have full access to AppointmentManagement.tsx and AppointmentDetail.tsx with the same capability as admin — EXCEPT they cannot access the Finance tab on the detail view (hidden for role=staff).

- Create appointments: YES
- Approve / Reject: YES
- Assign / Reassign expert: YES
- Mark checklist items complete: YES

- Add internal notes: YES
- Review reports, request revision: YES
- View Finance tab: NO — hidden
- Void invoices / record payments: NO
- Cancel appointments: YES (with reason)
- Archive appointments: NO — admin only

1.3 Staff Calendar (StaffCalendar.tsx)

A calendar view of all scheduled appointments. Gives the operations team a visual picture of capacity and scheduling gaps.

- Views: Month, Week, Day (toggle between views)
- Each appointment block: Reference, Claimant name, Expert name, Type, Status colour
- Click block → AppointmentDetail for that appointment
- Filter by: expert, appointment type, venue
- No drag-and-drop scheduling — reschedule via AppointmentDetail only
- Export: print-friendly weekly schedule (browser print CSS)

1.4 Staff CRM Access

- Attorney Management: VIEW + EDIT (no delete, no deactivate)
- Expert Management: VIEW + EDIT + ASSIGN TO APPOINTMENT
- Claimant Management: VIEW + EDIT
- No ability to create portal access for attorneys or claimants — admin only

1.5 Staff Reports Access

- View all submitted reports
- Review report → mark comments
- Approve report → triggers delivery to attorney email
- Request revision → notifies expert with reason
- Cannot access financial report generator

1.6 Staff Communications Access

- Full view of CommunicationsCenter.tsx (read-only log)
- From AppointmentDetail: can send ad-hoc email to attorney or expert
- Can send appointment reminder manually (uses APPT_REMINDER template)
- Cannot edit email templates — admin only

1.7 Staff Sidebar Navigation

Nav Item	Route	Notes
Dashboard	/staff	Home — work queue
Calendar	/staff/calendar	All appointments calendar view

Appointments	/staff/appointments	Full list with search/filter
Attorneys	/staff/crm/attorneys	CRM — attorneys
Medical Experts	/staff/crm/experts	CRM — experts
Claimants	/staff/crm/claimants	CRM — claimants
Reports	/staff/reports	Report review queue
Communications	/staff/communications	Communication log
Notifications	Panel (header)	Bell icon in header

SECTION 2 — FINANCE OFFICER DASHBOARD

The Finance role has a laser-focused dashboard. Finance officers see appointment context only to understand invoice context — they cannot change appointment status, assign experts, or manage CRM. Every number is in ZAR. All amounts stored as cents, displayed as Rands.

2.1 Finance Dashboard Home (FinanceOfficerHome.tsx)

KPI Cards — 8 cards:

- Total Outstanding (ZAR) — sum of all SENT + OVERDUE invoices
- Collected This Month (ZAR) — sum of PAID invoices this calendar month
- Collected This Year (ZAR) — YTD total
- Overdue Invoices — count with total ZAR
- Invoices to Send — count of DRAFT invoices ready to send
- Escalated Accounts — count where debt has been escalated
- Average Payment Turnaround — days from invoice sent to paid (30-day rolling avg)
- VAT Collected This Month — ZAR value for SARS compliance

Finance Overview Charts:

- Monthly Revenue Bar Chart — last 12 months, ZAR collected per month
- Invoice Status Pie Chart — DRAFT / SENT / PAID / OVERDUE / ESCALATED breakdown
- Top 10 Attorney Firms by Outstanding Balance — sorted descending

2.2 Invoice Management (FinanceInvoiceList.tsx)

- Full list of all invoices with: invoice number, appointment ref, attorney firm, amount excl VAT, VAT, total, status, due date, days overdue
- Filter: by status, attorney, date range, amount range
- Sort: by due date, total amount, days overdue
- Pagination: 25 per page

Invoice Actions per Status:

Invoice Status	Available Actions
DRAFT	Edit amounts, Send Invoice (→ SENT, email to attorney)
SENT	Record Payment, Mark Overdue (manual), Void (with reason)
OVERDUE	Record Payment, Send Reminder, Escalate, Void (with reason)
ESCALATED	Record Payment, Write Off (admin approval required)
PAID	View receipt, Download PDF — no further actions
VOIDED	View only — no further actions

2.3 Record Payment (Modal)

- Payment date (date picker)
- Payment method: EFT Bank Transfer | Credit Card | Cheque | Cash
- Reference number (EFT reference / card auth code)
- Amount received (ZAR) — validates against invoice total
- Part payment: allowed — creates a PARTIAL_PAYMENT record, invoice remains SENT
- Full payment: closes invoice → PAID, generates receipt, triggers audit log
- Receipt: auto-generated PDF via reportEngine, stored in Supabase Storage, sent to attorney email and stored against appointment

2.4 Invoice PDF Generator

When an invoice is sent, the system generates a professional PDF invoice using the Supabase Edge Function invoice-generator. The PDF must include:

- Company letterhead: Kutlwano & Associates logo, address, VAT number
- Invoice number, date, due date (30 days from invoice date)
- Attorney firm name and address (billing address from attorney record)
- Appointment reference number and date
- Claimant name and matter reference
- Line items: Expert consultation fee + any additional charges
- Subtotal excl VAT | VAT at 15% | TOTAL incl VAT
- Banking details for EFT payment
- Footer: 'This is a computer-generated invoice. E&OE.,'

2.5 Fee Schedule Management

Finance officers manage the fee schedule that drives invoice generation. Fees are per appointment_type per expert (override) or per appointment_type (default).

- Default fee per appointment type (used when no expert-specific rate exists)
- Expert-specific override fee (set per expert × appointment type)
- All fee changes audit-logged with before/after values
- Effective date: new fees apply to appointments created after the effective date

2.6 Finance Reports

- Monthly Revenue Report (CSV + PDF) — invoiced vs collected vs outstanding
- VAT Report — total VAT collected per month (SARS format)
- Aged Debtors Report — outstanding invoices grouped by 30/60/90/120+ days
- Attorney Statement — all invoices for a specific attorney, date range
- Year-to-Date Summary — totals by month for financial year

2.7 Finance Sidebar Navigation

Nav Item	Route	Notes
----------	-------	-------

Finance Home	/finance	KPI overview + charts
Invoices	/finance/invoices	Full invoice list
Payments	/finance/payments	Payment history log
Fee Schedules	/finance/fees	Manage appointment type fees
Reports	/finance/reports	Financial report generator
Appointments (view)	/finance/appointments	Read-only — context for invoices

SECTION 3 — VIEWER DASHBOARD

The Viewer role is read-only. Viewers can see the operational state of the platform but cannot create, edit, approve, or take any action that mutates data. Typical use: senior partners, external auditors, compliance officers. Every action button is hidden for this role — there are no action columns in tables.

3.1 Viewer Dashboard Home (ViewerDashboardHome.tsx)

- Same KPI stat cards as Admin Dashboard Home — but all values are read-only
- No Quick Action buttons — this row is hidden for viewer role
- Today's appointments table: columns only, NO Actions column
- Pending approvals widget: shown but all Approve/Reject buttons hidden
- Recent activity feed: visible — shows platform activity

3.2 Viewer Access Matrix

Feature	Access
View appointments list	YES — read-only, no action column
View appointment detail (all tabs)	YES — all tabs visible, no action buttons
View CRM (attorneys, experts, claimants)	YES — read-only, no edit
View finance overview	NO — finance section hidden from sidebar
View reports list	YES — can see status, cannot approve or deliver
Download reports	NO — download links hidden
View communications log	YES — read-only
View analytics	YES — all charts and data
View audit logs	NO — admin only
View staff management	NO — admin only
View system settings	NO — admin only
Export CSV	NO
Calendar view	YES — read-only

3.3 Viewer Sidebar Navigation

Nav Item	Route
Overview	/viewer
Appointments	/viewer/appointments
Calendar	/viewer/calendar
Attorneys	/viewer/crm/attorneys
Experts	/viewer/crm/experts
Claimants	/viewer/crm/claimants

Reports	/viewer/reports
Analytics	/viewer/analytics

SECTION 4 — ATTORNEY PORTAL DASHBOARD

The Attorney Portal is an EXTERNAL portal. Attorneys access it via the public website after OTP authentication. They see ONLY their own firm's appointments, claimants, and documents. Zero visibility into other firms' data — enforced via RLS on every table. After splash → loading → EXACT login page → OTP → Attorney Dashboard.

4.1 Attorney Login Flow

- Attorney navigates to /portal/login
- Enters email address → system validates attorney exists in attorneys table
- OTP sent to email via communicationEngine (template: PASSWORD_RESET reused, or dedicated PORTAL_LOGIN_OTP template)
- Attorney enters 6-digit OTP → validated against otp_tokens table
- OTP valid → session created → redirect to /portal/attorney/dashboard
- OTP expired or invalid → clear error message, option to resend
- Max 3 OTP attempts before 15-minute lockout

4.2 Attorney Dashboard Home (AttorneyDashboardHome.tsx)

KPI Cards (scoped to this attorney's firm only):

- My Active Appointments — appointments not yet ARCHIVED or CANCELLED
- Appointments This Month
- Awaiting Report — appointments in REPORT_PENDING or REPORT_SUBMITTED
- Outstanding Invoices — sum of unpaid invoices for this firm (ZAR)

Recent Appointments Table:

- Columns: Reference, Claimant Name, Expert, Date, Type, Status, Report Status
- No attorney should see another firm's appointments — RLS enforced at DB level
- Actions: View Details, Download Report (if APPROVED), View Invoice
- Quick Log New Appointment button — opens AppointmentRequestModal

4.3 Request New Appointment (AppointmentRequestModal)

Attorneys submit appointment requests. They do NOT schedule — they request. Admin staff approve and schedule. The form must be clean, simple, and mobile-friendly.

- Claimant Details: full name, ID number, date of birth, gender, contact number
- Injury / Complaint: free-text description of the medico-legal matter
- Preferred appointment type: dropdown of specialisations
- Preferred region / province for the assessment
- Matter reference number (attorney's internal reference)
- Preferred date range (not a specific date — admin finalises scheduling)

- Supporting documents upload: ID copy, referral letter, medical records (max 10MB each)
- Submit → status = DRAFT → email to admin (APPT_CONFIRMATION_ATTORNEY template)
- Attorney sees new appointment appear immediately in their list with status 'Draft'

4.4 Attorney — Appointment Detail View

Stripped-down version of the admin Appointment Detail. Shows relevant information only — no internal notes, no staff checklist, no finance tab detail.

- OVERVIEW tab: reference, status, appointment date/time, venue, expert name
- CLAIMANT tab: claimant details for this matter
- REPORTS tab: if report is APPROVED → Download Report button (signed URL, expires 1 hour)
- INVOICES tab: invoice number, amount, status, due date, payment details
- DOCUMENTS tab: upload additional documents, view existing uploads
- COMMUNICATIONS tab: emails sent to this attorney regarding this appointment

4.5 Attorney Sidebar Navigation

Nav Item	Route	Description
Dashboard	/portal/attorney	Home — KPI + recent appointments
My Appointments	/portal/attorney/appointments	All appointments for this firm
Log New Appointment	Modal trigger	Appointment request form
My Claimants	/portal/attorney/claimants	All claimants linked to this firm
Invoices	/portal/attorney/invoices	All invoices for this firm
Documents	/portal/attorney/documents	Document library per appointment
My Profile	/portal/attorney/profile	Firm details, contact info

SECTION 5 — MEDICAL EXPERT PORTAL DASHBOARD

Medical Experts receive appointment assignments from admin. They confirm availability, conduct assessments, and submit medico-legal reports. Their portal is task-driven. They see ONLY their own assigned appointments. RLS enforced at database level.

5.1 Expert Login Flow

- Expert navigates to /portal/login (same login page as attorney — role detection on backend)
- Email → OTP (6-digit, 10 minutes expiry) → Expert Dashboard
- Role detected from profiles.role field → routing to correct portal

5.2 Expert Dashboard Home (ExpertDashboardHome.tsx)

KPI Cards:

- My Upcoming Appointments — scheduled and confirmed, next 30 days
- Awaiting My Confirmation — appointments assigned but not yet confirmed by expert
- Assessments To Submit — appointments in ASSESSMENT_PENDING state
- Reports To Submit — assessments done, reports not yet submitted
- Completed This Month — appointments fully resolved this month

Upcoming Appointments Table:

- Columns: Reference, Claimant Name, Date/Time, Venue, Type, Status, Action
- Action: Confirm Attendance | Submit Assessment | Submit Report | View Details
- Priority sort: AWAITING CONFIRMATION first (urgent), then by appointment date ascending
- Alert banner if any appointment is TODAY — highlighted at top

5.3 Confirm Appointment Attendance

When an appointment is assigned (status = SCHEDULED), the expert must confirm. This is a critical step — admin cannot proceed without expert confirmation.

- Expert sees: appointment details, claimant name, date/time, venue, appointment type
- Expert clicks Confirm — status changes to CONFIRMED
- Expert clicks Cannot Attend — opens modal requiring reason and preferred alternative dates
- Cannot Attend → admin notified, appointment back to SCHEDULED for reassignment

5.4 Submit Assessment (AssessmentForm.tsx)

After conducting the physical assessment, the expert submits findings via this form. This is a structured clinical form — not a free-text field.

- Assessment date (defaults to appointment date, editable)
- Clinical findings: structured text areas per body system relevant to appointment type
- Diagnosis codes: ICD-10 code input (search/lookup or manual entry)
- Functional limitations: yes/no toggles + free text description
- Treatment history confirmed: yes / no / partial
- Expert clinical notes: free text
- Attach documents: ability to attach supporting clinical documents
- Submit → status transitions to ASSESSMENT_COMPLETE → expert notified to submit report

5.5 Submit Report (ReportUploadModal)

The medico-legal report is the primary deliverable of the expert. It is a PDF document the expert produces offline and uploads here.

- Upload PDF (max 20MB — validated on client and server)
- Report date (date picker — must match or follow assessment date)
- Report type: Preliminary | Final | Addendum
- Confirmation checkbox: 'I confirm this report is accurate and complete'
- Submit → stored in Supabase Storage → status = REPORT_SUBMITTED
- Admin notified via email (REPORT_SUBMITTED_NOTIFY template)
- If admin requests revision → expert sees revision request with admin notes
- Expert can upload revised report — creates new version, previous version retained

5.6 Expert Availability Calendar

- Expert sets their available dates for the coming 90 days
- Calendar UI: click a date to toggle available / unavailable
- Admin sees this availability when assigning experts to appointments
- Expert can block dates for leave, conferences, etc.
- Changes saved instantly via Supabase — no save button needed

5.7 Expert Profile

- Personal details: name, email, phone, practice address
- Professional details: HPCSA number, specialisation(s), practice number
- Bank details: for payment of fees (encrypted storage, not displayed in full)
- Profile updates: email requires OTP re-verification

5.8 Expert Sidebar Navigation

Nav Item	Route	Description
Dashboard	/portal/expert	Home — upcoming + action queue
My Appointments	/portal/expert/appointments	All assigned appointments
Assessments	/portal/expert/assessments	Pending assessment submissions
Reports	/portal/expert/reports	Report submission + history

Availability	/portal/expert/availability	Set availability calendar
My Profile	/portal/expert/profile	Professional profile + bank details

SECTION 6 — CLAIMANT PORTAL DASHBOARD

The Claimant Portal is the simplest portal. Claimants are referred by their attorney. They receive ONLY enough information to know what is happening with their assessment. They cannot view legal documents, reports, or financial information. POPIA compliance is critical — claimants see ONLY their own data.

6.1 Claimant Access Rules

RULES — NON-NEGOTIABLE:

- Claimants only see their own record — RLS at database level, not just UI level
- Claimants CANNOT see the medico-legal report (it belongs to the attorney)
- Claimants CANNOT see financial information (invoices, amounts)
- Claimants CANNOT see expert contact details (to prevent direct contact)
- Claimants CAN see: their appointment date, venue, and the expert's first name only
- All POPIA consent captured at account creation — consent_given field in claimants table

6.2 Claimant Dashboard Home (ClaimantDashboardHome.tsx)

- Welcome message with claimant's first name
- Next appointment card: date, time, venue, expert first name, appointment type label
- Appointment status in plain English (NOT technical status names):
 - 'Your appointment has been scheduled' (= SCHEDULED / CONFIRMED)
 - 'Your assessment is being reviewed' (= ASSESSMENT_COMPLETE / REPORT_PENDING)
 - 'Your case is complete' (= ARCHIVED)
 - 'Your appointment is being arranged' (= DRAFT / APPROVED)
- Appointment history: list of all their appointments (date, type, status label)
- Documents section: only consent forms and ID documents they can view

6.3 Claimant Appointment Detail

- Appointment date, time, venue (with map link if address available)
- What to bring: system displays a plain-English preparation checklist
- Expert name (first name only) and appointment type description
- Status in plain English
- Contact us: button to send a query to admin (routed through communications engine)

6.4 Claimant Profile

- Name, contact number, email address
- Physical address
- POPIA consent status and date of consent
- Edit phone and email — email change requires OTP re-verification

6.5 Claimant Sidebar Navigation

Nav Item	Route	Description
Home	/portal/claimant	Dashboard + next appointment
My Appointments	/portal/claimant/appointments	Appointment history
My Profile	/portal/claimant/profile	Personal details + consent
Contact Us	/portal/claimant/contact	Send query to admin

SECTION 7 — SHARED PORTAL & ROUTING RULES

These rules apply to ALL portals — attorney, expert, and claimant. They govern routing, session handling, and the login experience.

7.1 Shared Login Page

ALL portal users (attorneys, experts, claimants) use THE SAME login page. The login page design must match EXACTLY what is shown in the uploaded reference image. Role detection happens server-side after OTP verification — the login page does not ask for role.

- Single email input field
- 'Request Access Code' button → sends OTP
- OTP input (6-digit, numeric)
- 'Verify' button → verifies OTP
- After verification: backend reads profiles.role → routes to correct portal
- If no profile found → error: 'This email is not registered. Contact Kutlwano & Associates.'
- Forgot Password link → same OTP flow (OTP is both the login AND the password reset mechanism)

7.2 Role-Based Routing After Login

Profile Role	Redirect To
admin	/admin
staff	/staff
finance	/finance
viewer	/viewer
attorney	/portal/attorney
expert	/portal/expert
claimant	/portal/claimant

7.3 Session & Security Rules (All Portals)

- Session stored in Supabase Auth managed cookies — NOT localStorage
- Session timeout: 8 hours for internal staff, 4 hours for external portal users
- Every protected route checks: (1) valid session, (2) correct role
- Expired session: clear redirect to /login with ?reason=session-expired
- Concurrent sessions: allowed — user may be on desktop and mobile simultaneously
- Logout: clears Supabase session, redirects to /login
- OTP: 6-digit numeric, 10-minute expiry, max 3 attempts, 15-minute lockout after 3 fails

7.4 Splash Screen → Login Flow

This is the EXACT required flow. Every detail below is mandatory. Do NOT alter the login page in any way.

FLOW — NON-NEGOTIABLE:

- 1. App loads → SplashScreen.tsx renders (logo, company name, animated loader)
- 2. Splash screen holds for minimum 1.5 seconds, maximum 2.5 seconds
- 3. While splash is showing: Supabase session check runs in background
- 4a. If valid session found → redirect directly to correct dashboard (skip login page)
- 4b. If no session → SplashScreen fades out → EXACT login page renders (CSS raw match)
- 5. Login page: NO CSS changes, NO layout changes, NO new styling, NO font changes
- 6. After OTP success → role-based routing (7.2 above)

7.5 Mobile Responsiveness

All portals must work on mobile. Use ONLY the existing CSS breakpoints. Do not add new media queries.

- Sidebar: collapses to hamburger menu on mobile
- Tables: horizontal scroll on mobile (overflow-x: auto on table wrapper)
- Forms: full-width inputs on mobile
- Modals: full-screen on mobile
- KPI cards: single column on mobile

SECTION 8 — BUILD ORDER FOR REMAINING DASHBOARDS

Follow this order strictly. Internal dashboards before external portals. Engines are already built (per Admin Dashboard Prompt). Shared components are already built. Start here:

#	File / Module	Depends On
1	Role-based router (AppRouter.tsx)	Auth context, all role routes
2	StaffDashboardHome.tsx	appointmentEngine, auditEngine
3	StaffCalendar.tsx	appointmentService
4	Staff routes + StaffLayout.tsx	shared AdminLayout pattern
5	FinanceOfficerHome.tsx	financeEngine
6	FinanceInvoiceList.tsx	financeEngine, financeService
7	Record Payment Modal	financeEngine
8	Invoice PDF Edge Function	reportlab or pdf-lib in Deno
9	Finance routes + FinanceLayout.tsx	shared layout pattern
10	ViewerDashboardHome.tsx	All read services
11	Viewer routes + ViewerLayout.tsx	read-only guard HOC
12	Shared Portal Login Page	communicationEngine (OTP), authService
13	Splash Screen (SplashScreen.tsx)	authService session check
14	AttorneyDashboardHome.tsx	appointmentService (RLS scoped)
15	AppointmentRequestModal (attorney)	appointmentEngine.createAppointment
16	Attorney portal routes + layout	portal layout, role guard
17	ExpertDashboardHome.tsx	appointmentService (RLS scoped)
18	AssessmentForm.tsx	appointmentEngine.assessment methods
19	ReportUploadModal (expert)	reportEngine, documentEngine
20	Expert availability calendar	expertService.setAvailability
21	Expert portal routes + layout	portal layout, role guard
22	ClaimantDashboardHome.tsx	appointmentService (RLS scoped, stripped fields)
23	Claimant portal routes + layout	portal layout, role guard
24	E2E test: full login flow all roles	All portals + splash screen

END OF STAFF DASHBOARDS PROMPT — KUTLWANO & ASSOCIATES

Use alongside AdminDashboard_Prompt_Kutlwano.pdf • Version 1.0 • June 2025
